Article 2 - Research Programme

Research Title (and research sub-programme):

Development of a Virtual Helicopter model for the development of vibration reduction systems
Analysis of a classical helicopter configuration

Research programme description:

The goal of the project is to improve a numerical tool denominated MASST for the linearized aeroservoelastic analysis of rotorcraft. The environment will be used to investigate novel vibration reduction devices. It must provide a realistic benchmark for evaluating improvements with respect to the baseline aircraft and a system for the evaluation of the robustness of active control schemes used. Within this project, the numerical tool needs to be applied to the specific problem of airframe vibrations in interaction with suppression devices. Most of the activity is associated with model preparation and adaptation for the specific purpose of the project.

Starting and implementation of the research programme:

Sono richieste le seguenti funzionalità di modellazione

- dinamica strutturale della fusoliera (dal FEM)
- aeroelasticità di rotori multipli (da CAMRAD / JA)
- sensori (funzioni di trasferimento in Matlab)
- attuatori (funzioni di trasferimento in Matlab)
- controllo (connettori in Matlab/Simulink)

L'interazione con i dispositivi di soppressione delle vibrazioni è ottenuta in modo incrementale, in base alla complessità del modello del dispositivo:

- coefficiente / matrice di cedevolezza equivalente
- coefficiente / matrice di cedevolezza dinamica (funzione di trasferimento / modello agli stati)
- Modello FEM dettagliato, opzionalmente condensato con approccio Craig-Bampton
- Componente dinamico di black-box fornito in Simulink, con specifiche I / O appropriate.

Activities that the Temporary Research Fellow will carry out, obligations of the Temporary Research Fellow and conditions :

Saranno sviluppati i seguenti risultati

- 1) Modello di base dell'analisi delle vibrazioni degli aeromobili per MASST
- 2) Metrica e metodologie per la valutazione delle prestazioni di un dispositivo di soppressione delle vibrazioni
- 3) linee guida di modellazione per dispositivi generici passivi e attivi
- 4) valutazione dell'azione combinata di più dispositivi attivi e passivi
