

PROVA SCRITTA 1:

1. XJTU-Polimi Joint School of Design and Innovation is based in Xi'an, China, and currently offers 2 undergraduate programs, one in Architecture and one in Engineering-Industrial Design. The program of Architecture last 5 years whereas the program of Engineering-Industrial design last 4 years, each program admits 120 Chinese students every year. Lessons are held partly by professors from Xi'an Jiaotong University and partly by professors from Politecnico di Milano.

Imagine having to write a guide for professors of Politecnico di Milano who will spend a couple of months teaching at XJTU-Polimi Joint School of Design and Innovation in Xi'an. List a series of topics you would include in the guide with a short description. In addition to practical advices, focus on cultural differences. What advices would you give them from a cultural point of view?

2. Rettore

PROVA SCRITTA 2:

1. XJTU-Polimi Joint School of Design and Innovation is based in Xi'an, China.

The administrative staff is Chinese whereas the professors are both Chinese (professors from Xi'an Jiaotong University) and Italian (professors from Politecnico di Milano).

For the School to function and express all its potential it is essential that the

people who work there communicate and interact frequently and in the best possible way.

Polimi professors need to learn from the Chinese staff how "things" work (exams, classes, holidays...) and to collaborate closely with the Chinese professors to coordinate teaching activities

and carry out research projects. Being familiar with both cultures, how would you

promote and improve the Joint School internal communication? What initiatives would you set up?

2. Il Direttore Generale

PROVA SCRITTA 3:

1. XJTU-Polimi Joint School of Design and Innovation is based in Xi'an, China, and currently offers 2 undergraduate programs (Architecture and Engineering-Industrial Design) to Chinese students. Lessons are held partly by professors from Xi'an Jiaotong University and partly by professors from Politecnico di Milano.

For the future, there are plans to expand the educational offer and launch joint research projects with companies.

The Joint School building itself, which nowadays houses offices, study spaces and an auditorium, was originally designed to also house research laboratories in collaboration with companies.

What would you do to make the Joint School known among Chinese and Italian or International companies? How would you promote the activities of the Joint School to attract the attention of businesses and possibly investments? What are the first steps you would take and the main channels you would use?
