

HOW TO PARTICIPATE

In order to apply for this course please click the link below:

<https://www.polimi.it/en/corsi/master-universitari-e-corsi-post-laurea/translate-to-english-dettaglio-master/391>

and insert your application as requested.

The deadline for the application is **November 4, 2024**.

Admission to the course follows a first-come, first-served basis.

Minimum number of participants: 10

Maximum number of participants: 30

If the minimum number participants is reached, the course will start as planned. If not, the course will be postponed or cancelled.

This communication will be sent to participants by 6 November 2024, along with detailed instructions on how to proceed with the payment of the registration fee.

If necessary, the Direction may modify the programme, the Faculty and the course teaching method.

In case of proven and serious circumstances preventing from participating to the course, the participant has got two options:

- 1) To obtain the refund of the registration fee, provided that the subject student has duly informed the course staff by 8 November 2024.
- 2) To keep on hold the registration fee, assuming the relevant amount is used for the following course session. In line with the above, this option is viable, as long as the course staff has been properly informed, again by 8 November 2024.

Politecnico di Milano is only liable for the refund of the registration fees already honored.

The Institution/Company is allowed to replace a participant with another employee before the course starts, assuming the course staff has been promptly informed accordingly.

DELIVERY STRUCTURE

Dipartimento di Energia – Politecnico di Milano

COURSE DIRECTORS

Prof. Enrico Zio - Department of Energy, Politecnico di Milano

Prof. Piero Baraldi – Department of Energy, Politecnico di Milano

DURATION, MODE OF DEPLOYMENT AND LOCATION

The course is held from **November 18 to November 20, 2024**

from 9.30 to 17.30 (CET).

It will be held in **hybrid setting** (both physical and virtual attendance is allowed) at the Department of Energy - Politecnico di Milano, Campus Bovisa La Masa, 20156, Milano.

REGISTRATION FEE:

€ 2500 (full registration fee)

€ 1200 (PhD students)

PHD STUDENTS SHOULD ATTACH TO THE REGISTRATION FORM THE CERTIFICATE OF ENROLLMENT IN THE PHD PROGRAM OF THEIR UNIVERSITY.

VAT is not applicable to the registration fees due to art. 10 DPR 633/26.10.72 and subsequent modifications.

SCHOLARSHIP

The European Safety and Reliability Association (ESRA, www.esrahomepage.eu) supports the course with two scholarships to be awarded to PhD students. Scholarships will be assigned considering the affinity of the research to the topics of the course, the quality of the CV and the number and impact of publications in the field.

IF YOU ARE INTERESTED, PLEASE ATTACH YOUR CV TO THE REGISTRATION FORM.

DIPARTIMENTO DI ENERGIA

RAM&PHM 4.0: Advanced methods for Reliability, Availability, Maintainability, Prognostics and Health Management of industrial equipment

XXVI Edition
November 18-20, 2024

Organizers:

Department of Energy, Politecnico di Milano
Laboratory of Analysis of Signals and Analysis of Risk (LASAR)
(www.lasar.polimi.it)
Energy Data and Information Lab (EDILAB)

Sponsorship:

ESRA (European Safety and Reliability Association)

Support:

ARAMIX Srl, Milano, Italy
IEEE – Reliability Society, Italian Chapter, Italy
MINES ParisTech, PSL Research University, CRC, Sophia
Antipolis, France

COURSE PARTICIPANTS

The course is mainly dedicated to control, process, quality and maintenance engineers, asset managers, data scientists, data miners, researchers and PhD students in the areas of Reliability, Availability, Maintainability (RAM), and fault diagnostics and Prognostics and Health Management (PHM).

TRAINING FORMAT

A part of the course is devoted to lectures on advanced methods for the availability, reliability and maintainability (RAM) analysis of complex systems, and Prognostics and Health Management (PHM) for condition-based and predictive maintenance. Monte Carlo Simulation, nonlinear regression and data analytics (Principal Component Analysis, Auto-Associative Kernel Regression, Artificial Neural Networks, Ensemble Systems, Deep Learning, Convolutional Neural Networks, Reservoir Computing, Particle Filtering) are illustrated. Another important part of the course consists of hands-on sessions in which the participants directly apply the methods explained in the lectures to practical case studies (MATLAB and/or PHYTON will be used).

Finally, in the last part of the course, real applications of the advanced methods illustrated in the course are presented. The applications range from Monte Carlo Simulation for system availability analysis to the use of regression and classification techniques for fault detection, to classification and prognostics for condition-based, predictive and prescriptive maintenance management.

Lectures are held in English. All participants will receive a complete set of the presentation slides with specific examples and case studies, selected reference lists and resources in electronic format.

CERTIFICATE OF ATTENDANCE

At the end of the course, the participants will receive a certificate of attendance, provided that they have attended at least 80% of the course lectures and that they have filled in the anonymous participant evaluation questionnaires.

MISSION AND GOAL

In recent years, the volume of data and information collected by the industry has been growing exponentially, and more sophisticated and performing analytics have been developed to exploit their content. This offers great opportunities for optimized, safe and reliable productions and products, including optimal predictive maintenance for “zero-defect” production with reduced warehouse costs, and improved system availability, with “zero unexpected shutdowns”. To grasp these opportunities, new system analysis capabilities and data analytics skills are needed. The goal of this course is to provide participants with advanced methodological competences, analytical skills and computational tools necessary to effectively operate in the areas of reliability, availability, maintainability, diagnostics and prognostics of modern industrial equipment and systems. The course presents advanced techniques and analytics to improve safety, increase efficiency, manage equipment aging and obsolescence by setting up condition-based, predictive and prescriptive maintenance and asset management strategies.

CONTENTS

Methods:

Statistical techniques for system reliability/availability estimation (Monte Carlo Simulation);
Machine learning techniques for PHM (Principal Component Analysis, Auto-Associative Kernel Regression, Artificial Neural Networks, Deep Learning, Ensemble Systems);
Bayesian filtering for prognostics (Particle Filtering).

Exercise sessions:

Monte Carlo simulation for system reliability/availability analysis;
Auto-Associative Kernel Regression for fault detection; Artificial Neural Networks for component fault diagnostics and prognostics;
Particle Filter for failure time prediction;

Applications:

Monte Carlo Simulation for system reliability/availability analysis and condition-based maintenance management; Regression and classification techniques for fault detection, classification and prognosis in industrial equipment.
